

Business Intelligence - Product Optimisation

A Business Intelligence (BI) implementation of any size is a major accomplishment, often the culmination of substantial effort involving many people within an organisation. However, by the very nature of business today requirements, structures and technologies change and can highlight the need to optimise current product implementations - either to help growth, increase efficiencies, drive greater value from existing systems or take advantage of new technologies.

Whatever the driver, Sopra Group can help maximise Return on Investment (ROI) from your current BI implementations by determining if additional benefit can be delivered through:

- Advanced functionality
- System integration
- User training
- License reviews
- Best practice guidelines
- Upgrades
- Optimisation of data models
- Performance tuning
- Migration to new technologies
- Wider user acceptance

Our consultants will work with you to define the optimum strategy to maximise the benefit provided by your BI implementation. We will identify opportunities for improvement and develop recommendations, based on a review of your current strategy and investment, to achieve increased cost effectiveness and improved ROI for the business.

Methodology & Delivery

Our BI experts will work through three Steps with you, Step One to understand why the current product implementation is not meeting your needs, Step Two to analyse your existing deployment and then Step Three where we report findings, identify opportunities and practical options for improving the products deployed as well as provide advice on best practice and training needs.

Areas of Expertise

Sopra Group are vendor independent, but work closely with industry leading BI partners including:

Step One

Includes:

- Understanding the Business Requirements
- Looking at the Current Environment
- Reviewing Licensing & Versioning
- Completing a User Count
- Interviewing Key Stakeholders

Step Two

Includes the Analysis of:

- Phase One Investigations
- Technical Architecture
- Existing Documentation
- Support Calls
- Training Needs

Step Three

Feedback Includes

- Recommendations to Meet Business Requirements
- Advice on Best Practices
- Areas of High Risk
- Quick Fixes
- Clear Upgrade Paths
- A Standards Document
